

Method for producing ethyleneamines

Abstract

- 5 Preparation of ethyleneamines by reacting monoethanolamine (MEOA) with ammonia  
in the presence of a catalyst in a reactor (1) and separating the resulting reaction prod-  
uct, where ethylenediamine (EDA) obtained in the separation is reacted in a separate  
reactor (2) in the presence of a catalyst to give diethylenetriamine (DETA), and the  
10 resulting reaction product is passed to the separation of the reaction product resulting  
from reactor 1.
